SCHEDA INFORMATIVA

Materiali, assemblaggio del cassero e verniciatura

La produzione dei casseri viene effettuata con macchine altamente tecnologiche, con taglio al plasma ad alta definizione e con pressa piegatrice a controllo numerico solida.

Le casseforme sono realizzate con acciaio di prima scelta, assemblati e commercializzati presso la nostra sede.

La verniciatura è effettuata a polvere con forno a 200 gradi per garantire una maggiore qualità, una facile estrazione e longevità del prodotto.

Il tipo di lamiera utilizzato è di spessore 30/10 intagliata con punzonatrice, con macchina a taglio laser a controllo numerico per ottenere un prodotto con scarti millimetrici.

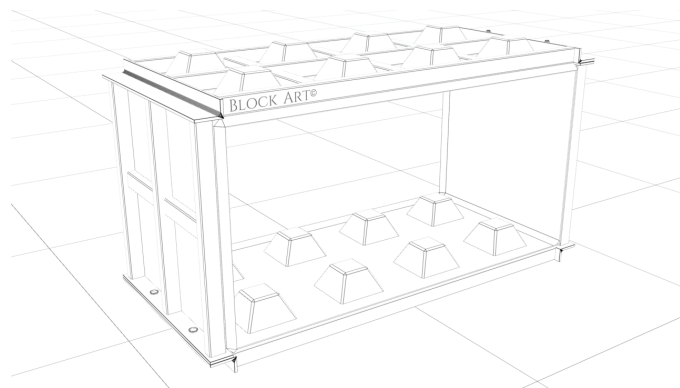

I casseri consentono la produzione di diverse forme di blocchi monolitici in cemento, utilizzabili e riciclabili nel settore dell'edilizia e non solo.

Le innovazioni, apportate al cassero, lo rendono flessibile per la produzione di svariati usi, semplificando notevolmente anche le operazioni di stoccaggio e logistica.

La durata del cassero è comprovata dall'intercambiabilità della lamiera imbullonata al telaio, sostituibile in qualsiasi momento.

L'assemblaggio del cassero, grazie ad una accurata progettazione, avviene grazie a degli appositi spinotti.

Il cassero offre anche un sistema di supporto brevettato, composto da ganci metallici che facilitano il sollevamento del blocco di calcestruzzo.
